

THAI DO THINH

Software Engineer // Full-Stack Developer

Final-year Computer Science student who has built and deployed several real web products, from database design to frontend and backend. Comfortable with Java, Python, JavaScript, TypeScript, C++, and frameworks like React and Spring Boot. I use AI coding tools daily to work faster while still reviewing everything myself. Looking for a Developer role to keep building real things.

Overview | Details

Internship

Finance AI & Automation Intern

Oct 2025 – Apr 2026

Ho Chi Minh City, Viet Nam

BW Industrial Development Joint Stock Company (Vietnam)

PROJECT: Finance Data Processing Web ↗ | Team Size: 3 | [React] | [TypeScript] | [Tailwind CSS] | [...]

Engineered an internal web application used by the finance and accounting team to process bank statements and generate automated cash reports, handling transaction extraction, classification, and reconciliation.

RESPONSIBILITIES

[01] Bank Statement Parsing

Built REST APIs with FastAPI, including parsers for 10+ banks (VCB, TCB, BIDV, ACB, MBB...) to automatically extract transaction data from uploaded statements, with OCR fallback via Gemini for scanned files.

[02] Cash Report Automation

Built a session-based pipeline to process and reconcile cash reports from multiple uploaded files, including automated transaction classification based on rules learned from the finance team's feedback — cutting processing time from about a day to two hours.

[03] Security & Access Control

Implemented enterprise-grade authentication with Google OAuth2 SSO (restricted to company email domain), JWT access tokens with refresh-token session tracking across devices, plus role-based access control (RBAC) separating admin and finance-team permissions.

02 EXPERIENCE

03 FEATURED PROJECT (01/03)

[Spring Boot] | [ReactJS] | [Vite] | [...]

GitHub Repo ↗ | Preview

FLEXICONNECT WEB ↗

Job Portal & Application Tracker Platform

Full-featured recruitment platform connecting candidates, employers, and administrators with comprehensive role-based access, job lifecycle management, and application workflows.

WHAT I BUILT

Backend & Database

Built REST APIs with Spring Boot and Spring Data JPA on a MySQL database, handling job listings, applications, and role-based access for candidates, employers, and admin.

Security

Implemented authentication and authorization with Spring Security and JWT.

Frontend Integration

Built the UI with ReactJS, Vite, and Tailwind CSS, consuming the backend REST API across all three user roles.

Deployment

Deployed on Render, resolving build errors independently to keep the app stable.

03 FlexiConnect

04 FEATURED PROJECT (02/03)

[React Native] [Expo] [Django] [...]

GitHub Repo ↗ Preview

FOOD DELIVERY & RESTAURANT BOOKING APP ↗

Fullstack Mobile Experience with Dual-Role Portals

Cross-platform mobile application covering customer food delivery ordering, table reservations, restaurant menu management, and dedicated kitchen staff (chef) workflows.

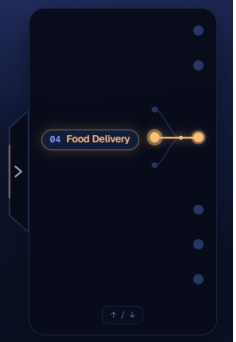

WHAT I BUILT

Backend & Database
Built REST APIs with Django REST Framework, covering menus, table bookings, orders, and reviews.

Payment Integration
Integrated MoMo and Stripe for order payments, including webhook handling for payment confirmation.

Frontend Integration
Built the mobile UI with React Native and Expo, covering separate flows for customers and kitchen staff (chefs).

Real-time Features
Implemented in-app chat between customers and the restaurant using Firebase.

05 FEATURED PROJECT (03/03)

[Next.js 16] [TypeScript] [Tailwind CSS v4] [...]

Live Demo ↗ GitHub Repo ↗

DEV PORTFOLIO ENGINE ↗

Pure Typographic Static Portfolio Architecture

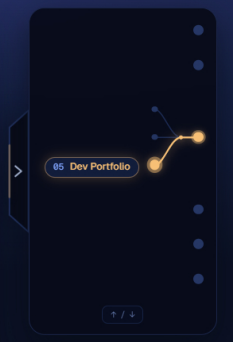

Minimalist, high-performance portfolio engine built with Next.js App Router and TypeScript, compiled to static export for zero-latency hosting on GitHub Pages via automated CI/CD.

WHAT I BUILT

FEATURE
100% static export (SSG) with automated deployment pipeline via GitHub Actions.

FEATURE
Pure typographic 2D vector flat-layered design system with zero icon or emoji dependencies.

FEATURE
Strict TypeScript typing throughout data models and component interfaces.

06 SKILLS

Languages
Core programming and scripting languages for systems and web.

JavaScript TypeScript Java Python C++ (Basic)

Frameworks & Platforms
Fullstack development frameworks across frontend and backend services.

ReactJS Next.js Spring Boot FastAPI Django Tailwind CSS RESTful API

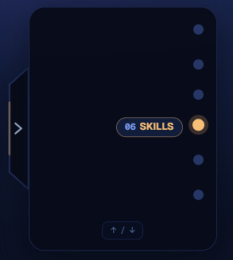

Databases
Relational data persistence, schema design, and caching layers.

PostgreSQL MySQL Redis

Tools & DevOps
Development tools, API testing, version control and deployments.

AI-Assisted Engineering
Leveraging cutting-edge AI tools to accelerate development velocity.

Claude Code Codex Antigravity (IDE)

Git | GitHub Actions | Postman | Render | Microsoft Office

Prompt Engineering | Code Review & Verification

07 EDUCATION

Degree — Oct 2022 – Present

HO CHI MINH CITY OPEN UNIVERSITY

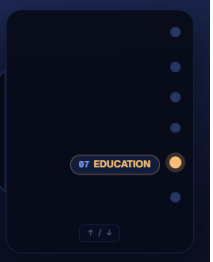

Major: Computer Science

Coursework:

Software Engineering | Web System Development | Object-Oriented Programming (OOP) | Data Structures & Algorithms | Modern Programming Technologies | Database Management Systems | Cloud Computing

Languages

Vietnamese	Native
English	Professional
